FIT-3D

Track Posture and Balance!

With our computer driven workforce, our posture consistently suffers and therefore causes pain, discomfort and other problems. **With Fit3D's posture application**, we can track your posture automatically over time. Because as you get stronger, it can improve!

Muscular Definition!

Track your body fat and muscle mass the most **CONSISTENT** and **ACCURATE** way! Not only does this give you a body composition analysis, it also shows your 3D avatar that will visually help you see where you are losing body fat and gaining muscle!

Track Weight Loss!

With weight loss usually being the #1 goal, we tend to see body composition positively changing even though the scale does not move much. The Fit3D will help you focus on the changes in body shape, while displaying multiple measurements taken, and a 3D avatar of your body!
